

## Core & Main Associates Earn Design-Build Institute of America (DBIA) Recognition

### Brian Coryell

National Sales - Treatment Plant Manager Brian Coryell recently fulfilled significant requirements to earn full Design-Build Professional™ accreditation - the highest level of design-build professional certification possible. Three to six years of substantial work experience is an additional prerequisite for Designated Design-Build Professional™ certification. Brian is the first associate within the Core & Main Treatment Plant group to achieve this distinction.

### Kendra Barnhart

Strategic Business Development Manager Kendra Barnhart recently achieved certification as a professional Associate DBIA, which is the nation's only measurable standard of an individual's knowledge of the Design-Build Done Right™ principles vital to successful project delivery. Kendra is the first female Core & Main associate and the first female waterworks distribution professional nationwide to earn this designation.

### Design-Build Project Delivery

In traditional project delivery, an owner must manage two separate contracts: designer and contractor. With Design-Build Project Delivery, the designer and contractor are on the same team. This provides the owner with both unified recommendations and accountability during the entire project cycle - from design to build-out.

Core & Main is a staunch supporter of Design-Build Project Delivery, and advocates Early Supplier Involvement within the process as a key partner on any Design-Build project team. Our robust training and advanced certification of our associates entrust Core & Main to serve as the supplier partner of choice for all Design-Build Treatment Plant projects nationwide.
